### (54) IMAGE SCANNER AND NETWORK CONNECTING SYSTEM FOR THE SAME

#### (57)Abstract:

**PROBLEM TO BE SOLVED:** To provide an image scanner, which can be directly connected to a network such as a LAN and does not require the provision of unwanted keys when using the image scanner connected to the network as copy machine or facsimile, concerning an image scanner, especially, an image scanner to be used while being connected to the client/server type LAN.  
**SOLUTION:** This system is provided with an image scanner 2 equipped with an input means for inputting the identification information of users, directory connected through a line to the image scanner 2 prepared for each user in advance for storing an image read by the image scanner 2, and server equipped with a storage means for storing the relation of correspondence between the identification information corresponding to each user and the directory for each user and when an image is inputted from the image scanner 2, that image is stored in the directory corresponding to the identification information inputted from the image scanner 2 by the server.

#### LEGAL STATUS

[Date of request for examination] 29.05.2002

[Date of sending the examiner's decision of rejection] 02.12.2003

[Kind of final disposal of application other than the examiner's decision of rejection or application converted registration]

[Date of final disposal for application]

[Patent number]

[Date of registration]

[Number of appeal against examiner's decision of rejection]

[Date of requesting appeal against examiner's decision of rejection]

[Date of extinction of right]
